---

Take a look at the Technical assistance notes from CSC to see if other data points would be helpful. The Gold Hill is actually Gold King mine - 7 level.

Sincerely,

Subject: Cement Creek update

---

Toeroek dropped out this morning. They were confident about the wetlands, but they were not confident about the sensitive environments--they felt they were getting in over their heads.

That leaves Susan Hall with URS at the Tech Center and they will go the week of August 22nd. I got the impression that URS was more experienced, but also more expensive. I hope the competitive factor helps keeps their costs down. I'm not going to tell URS that Toeroek dropped out.

It looks like Jeff Miller will be coming down with me to collect samples and do the wetlands and fishing documentation. This will be good since he has a similar site in Philipsburg, MT that both Bryan and I think would list (similar also to Standard Mine in Crested Butte).

Question: The little sample collection task for the Gold Hill Mine---do you want that done under the Upper Animas Reassessment TDD or the HRS document TDD? If it is the Reassessment TDD then I could just refer to the approved sample plan and field procedures. We will take only two 8-oz poly bottles for CLP analysis.

Thanks.
